Since I started on the slippery slope with a cheap Grizzly block plane, I've found myself aquiring and lusting for all manner of hand planes including a 200 year old Marples woodie, a mujifeng smoother, and some model maker planes.For a while, I seriously lusted after infill planes (still do).This book is the only one of it's type on making infill planes (that I'm aware of). However, there is much information on the internet on how to make them now. There are far more practical sources of information on hand plane making including Bill Carter's webpage, Sawmill Creek, and Ron Brese (who has an excellent plane kit).Personally, I'd recommend skipping this book, and just getting a kit.0 of 0 people found the following review helpful.
