Jeff Mowta : Marijuana New School Indoor Cultivation before purchasing it in order to gage whether or not it would be worth my time, and all praised Marijuana New School Indoor Cultivation:

4 of 4 people found the following review helpful. Great book for HydroponicsBy Tom From VTThis book has one of the best Hydroponics sections out there if you are looking to build a system. It covers all types of systems and has a parts list. The drawings are black and white but they are clear and work well. Anyone, no matter what your growing, would find the sections helpful. As for the rest of the book it is very well laid out. This book has parts lists and step by step instructions covering everything but may be lacking more detailed information than you are looking for. For

example lights. It tells you what you need to know and what square foot area a certain wattage may cover and what types of lights to use but it is concise where I was looking to read about various lights etc. In a nutshell it tells you what to get to accomplish your goal without going into huge detail of every light on the market. That being said It is great book and doesn't leave you hanging at all, you don't really need another book unless you are looking for a description of every light on the market. It does have color photos but it is the style where the color images are in three sections of about 8 pages with various color photos mostly of plants but not the hydroponic systems that are line drawn elsewhere. 1 of 1 people found the following review helpful. Save your \$\$By GuanoThe book looks as though the author researched several different types of hydroponic setups and made copies of the diagrams. It is silent as to how these systems perform, what are some of the pitfalls of each and any costs to build. The author obviously has never grown anything. This book is nothing but "Birdcage liner." 0 of 0 people found the following review helpful. great service!By james maxeyGot the book and I grew my crop with excellent results!!!

This comprehensive book provides step-by-step instructions for 20 affordable indoor growing setups. Packed with over 600 illustrations and photos, the book walks readers through the construction of both hydroponic and soil systems and shows how to maintain them throughout the growing season. Everything the budding gardener needs to know is covered in astonishing detail, including setting up a starter room, cloning, indoor designs, harvesting, drying, storing, troubleshooting, breeding, composting, as well as the latest tips and techniques.
