But first I think this book is not quite rightly titled. It doesn't speak much about "greenhouse" gardening. Rather, it's about outdoor gardening in the best ways possible, cutting out pesticides and herbicides as much as possible. You do this through "companion gardening" -- growing certain plants in the same area so they compliment each other.For instance, certain flowers, vegetables and herbs are natural repellants of both insects and weeds. Knowing how they benefit each other gives you the know-how to garden with wisdom. The author also covers watering systems for conservation and healthy growth. Then, the rewards -- how to harvest effectively. I discovered actionable steps and strategies that, I know, will make me a better garden.The author makes the science of gardening simple and motivational. After reading her advice, I said to myself: "I want to do that!" I want to work with ecology to reduce weeds and insects naturally. I want to grow the tastiest and most nutritious veggies, herbs and fruit. Now I'm convinced that, with the help of this excellent book, I'm well on that way to that goal.0 of 0 people found the following review helpful. ...
