before purchasing it in order to gage whether or not it would be worth my time, and all praised Methane Capture:
Options for Greenhouse Gas Emission Reduction:

Research on climate change has identified a wide array of sources that emit greenhouse gases (GHGs). Among the six gases that have generally been the primary focus of concern, methane is the second-most abundant, accounting for approximately 8% of total U.S. GHG emissions in 2008. Methane is emitted from a number of sources. The most significant are agriculture (both animal digestive systems and manure management); landfills; oil and gas production,

refining, and distribution; and coal mining.
