Carol Ford : Northlands Winter Greenhouse Manual before purchasing it in order to gauge whether or not it would be worth my time, and all praised Northlands Winter Greenhouse Manual:

5 of 7 people found the following review helpful. Best Manual Ever!!By Story Of LifeAmazing work of art from Chuck Waibel and Carol Ford - They truly pave the way for future generations while providing a unique model for others to learn from and be inspired by!! I was lucky enough to visit their greenhouse years after reading this as well as build my own based upon their model!! Best decision in my life!! It may seem hard at first however the way they laid it out step by step, creating an adaptable model that is easy to replicate and improve upon based upon your own needs. I bought a couple extra copies to give out to friends and family whenever I know of their passion for food or the local foods movement. This is one of those books you need on your shelf!3 of 6 people found the following review helpful. I was very disappointed. By the titleBy My LamI was excited about this book, but when the book arrived, I was very disappointed. By the title, I expected this book to provide a manual on how to build a winter green house with the sole purpose of growing food in the winter. The section on the buildout is minimal. It does not provide detailed plans and specs, but only written concepts. The majority of the book explains vegetables that are appropriate for winter gardening. If you are above beginner level, this book is a disappointment. In addition, the lack of quality photos is disappointing. There are few photos, though none of it are effective in showing foundations of building the

greenhouse. The photo quality is terrible. This book is not worth the money.
