DunnAltho this is an older book (published in 1974) and doesn't have some of the latest conifer cultivars listed, it is an incredible resource, giving sizes and hardiness zones. A must have for serious gardeners.

With plant descriptions and extensive notes on their cultivation. This illustrated colour guide to ornamental conifers, the largest comprehensive pictorial book on the subject, was written and compiled in such a way as to be easily used and understood by the average home gardener. The main aim, however, is to bring together some 550 of the world's most attractive and ornamental conifers in colour in one book, so that choices and comparisons may be made by people who are interested in conifers but are not well enough acquainted with the usually very complex botanical names that many of them go under. The author has made every attempt to keep conifer names in line with the latest available literature.
