Dry Climate GardeningBy GCollinsAlthough I do not live in what would be thought of as a dry climate, recent history has taught us that anywhere can be dry-very dry! This book does a good job of describing how to garden in even dryer spots in your yard, based on direction, sun, shade, wind, etc. I am finding it enjoyable and useful.13 of 13 people found the following review helpful. Colorful, Informative and Valuable.By fdoamericaThe world climate is changing. Water rationing has become common in many cities and states. Though you may not live in an extremely dry environment there are 'common sense' tips through out this book that can benefit any active gardener.The unique word, Xeriscape, is becoming more common as gardeners become

more environmentally conscious. It comes from the prefix xero = dry, dryness. Common associated words are : xeroderma (dry skin), xerophyte (plant or person flourishing in a dry, hot environment) and of course, Xerox (dry copy). Though the writing is written in a `xero' style, there is a ton of horticultural wisdom to be excavated in this book. The brilliant color photos are sure to make up for any short coming in literary inspiration. `Dry Climate Gardening' may help you to see gardening in a new way, a natural way. It teaches how to work with the forces of nature, not against them. Most beneficial is the section "Plants for Dry Climate Gardens". The sections starts with trees, goes to shrubs and ends with perennials. This section is a cornucopia of unusual plant varieties unique to most gardens. If the plants you select are right for the environment you will not have to `nuture and protect' them and have more time to sit, sip and celebrate your new garden. Strongly recommended. 4.5 stars.

Techniques for landscapes and gardens that receive fewer than 20 inches of annual rainfall. Inspiring garden scenes in 17 states from cold and warm deserts, dry grasslands, and Mediterranean climates. Selection guide details 85 trees, shrubs, and perennials appropriate for dry climates. Special chapter highlights efficient irrigation systems.
