10 of 10 people found the following review helpful. Good book for hunting land owners/managerBy A CustomerAs

someone who is new to managing a hunting property for personal use, I found John Weiss' book to be a very valuable resource. Lots of information on where to start, what deer and other wildlife prefer in terms of vegetation, and on where and how much to plant. The book is primarily designed for someone who has a mixed field/hardwood property and who has the ability to put in some serious time to improve the habitat. It is well written and interesting and chocked full of information - good value for the money. 0 of 0 people found the following review helpful. Four Stars By Charles has alot of info that i was looking for 0 of 0 people found the following review helpful. fairly good book By David Rech Pretty old, but still had some good info on mineral licks that I am currently using. I buy KDee 50 lb bags of #6. Has almost all the same nutrient's as described by Weiss

If you always dreamed of having big bucks living and feeding on the land you hunt, the *The Ultimate Guide to Planting Food Plots for Deer and Other Wildlife* is the book for you. Whether you hunt public, private or leased land, this book will help you attract and hold trophy-size bucks and does on your property. Weiss offers new, ground-breaking information that you won't find anywhere else, providing practical step-by-step information that you can apply this year to improve your chances of seeing and taking bigger deer with larger antlers no matter where you hunt. Almost any habitat can be easily improved to attract and hold whitetails within its borders. This one-of-a-kind book is the absolute ultimate source on the subject of planting food plots to attract and hold deer, turkey, bear, upland birds, waterfowl and small game to the lands you hunt. It will become your bible on the subject. You will refer to it over and over again. It's destined to be a classic. Remember, even doing a little planting and management to improve your land is better than doing nothing at all!

About the Author Thirty years ago, John weiss allowed a neighbor to plant corn on his land in southeastern Ohio. In return, he was to receive a percentage of whatever the corn sold for at market. Instead, he told his friend, "Leave my share standing in the field for the deer." That was his first food plot and he's been working with them, and benefiting all manner of wildlife, every year since. What he's learned has often been through simple trial and error. But mostly, his success has come from working with wildlife biologists, agronomists, and other hunter-landowners around the country, and his insight is sure to benefit your own efforts. Weiss holds a master's degree from Ohio University and a good deal of his hand-on research is conducted on his farm in Ohio where he lives with his wife, Marianne, and maintains numerous experimental food plots and clover plantings. He's written hundreds of articles for sportsmen and this is his nineteenth book.
