The pages had that wonderful old book smell which I wish I could buy as a car fragrance. There is a special satisfaction in making things with tools and machines built by one's self. Some would call this book outdated because it suggests using a Model T axles to build a machine but there are many clever ideas here and most are still relevant to a modern home workshop. Indeed if you are interested in making machines there is much to inspire creativity and problem solving for the men who designed these machines were smarter than your average bear and the old timers were good at adapting scrap into useful technology. My only real criticism would be the drawings are a tad small and my old guy eyes need reading glasses to see the numbers but I

highly recommend this book to anyone looking to build a self sufficient workshop.
