Pilar M. Echavarria : Portable Architecture and Unpredictable Surroundings before purchasing it in order to gage whether or not it would be worth my time, and all praised Portable Architecture and Unpredictable Surroundings:

Amazing collection of architecture that can be moved.Full-color photos, floor plans, and commentary for each project.Unique, insightful, cutting-edge.From the foldable home to blow-up shelters, a daring spirit pervades each project in this collection. Award-winning architects from around the globe contributed their finest work in portable architecture?some shelters designed for low-impact living, some for special uses, some for short-term and long-term housing or other purposes, some for those wishing to lead a nomadic lifestyle. Imaginative, provocative, the results push the envelope of what most Americans and architects think of as architecture. All projects are illustrated with full-color photographs, floor plans, and commentary from the creators. Portable Architecture is sure to be an endless source of inspiration for urban planners, architects, and anyone interested in thinking outside the box.

About the AuthorPilar EchAvarria is a Colombian architect who specializes in ephemeral architecture, urban design, and scenography for theater and dance. She lives in India.
