"The Craftsman hand tool you have purchased is a quality tool with which you can easily and expertly accomplish the work fo which it is intended, if you will use and maintain it in the ways that we recommend. Every job your tool is designed to do requires not only "muscle" but, also, some planning and followthrough thought. The tool provides the "muscle"; it is up to you to do the thinking. Each different type and model number tool has its own specifications, and may require accessories and attachments and/or operating and maintenance procedures that are different from those for similar tools having different model numbers. Then, too, havey-duty tools generally are designed for "bigger" and/or more continuous work jobs than can be done with lighter-duty models; and may even afford a wider range of applications (using accessories and attachments not indended for lighter-duty models)..."
