an interest within me that I never knew I would have for plants! My mom graduated with a degree in Agriculture and she loves planting more than ever! As for me, I'm just the girl who will sit at the corner, watch her, and wonder what's so interesting with planting. I was impressed with this book's take on raised bed gardening and how it made everything sound simple for beginners. What also made me love this book is that it doesn't overwhelm the readers (especially beginners like me) with information and it actually tackled the subject quite lightly without missing the important points that everyone must take note of. Can't wait to tell my mom about this and start working on our very own raised garden beds! :) 0 of 0 people found the following review helpful. This is indeed a good read! By Michelle Harrison I have an empty backyard and I want to put something in it. As I was going through all the options, I came across this book. I felt as if it's a real live person talking to me as I went through reading it because I can easily visualize what my backyard will look like once I'm done. My family is very conscious now of where we get our fruits and vegetables and we really want to try growing it on our own. I really love the book's emphasis on herbicides as a last resort as this is the main reason why we want to use our own backyard to grow our food. This is indeed a good read! 0 of 0 people found the following review helpful. Books I Enjoyed By gardentricks123 I enjoyed the book and look forward to reading many more good books
